

Bus Pittsburgh Expansion Rules

Setup

Place one Passenger on each of the four building locations <insert the graphic design element that distinguishes them after Todd finished>

One-Way Streets

Some streets display directional arrows. During the Vrrrooomm! action, Passengers can only be transported along those streets in the direction indicated by the arrows.

- Line Expansion may be performed in either direction, regardless of arrows.

Bridges

There are five white Bridge line markers and nine designated Bridge spaces on the game map. A Bridge may be placed on any unoccupied Bridge space at one of the ends of a player's line by using one of their Bus line marker placements granted by the Line Expansion action.

- Placing a Bridge does not consume the entire action unless the Player only has one (1) Line Expansion.
- Bridges may not be placed during the first line marker placements (initial setup).
- A bridge may never be placed on a crossing that is not one of the ends of the player's line.

Expanding After a Bridge

- If a Bridge exists at the end of your bus line, then during your next Line Expansion action, you may choose either to:
 - Expand your line from the far end of the Bridge, or
 - Expand from the last line marker of your line before the Bridge.
- Whichever option you choose becomes the new end of your line.

Forced Bridge Continuation

- A Bridge is not considered the end of a line when determining legal positions for placing a line marker unless:
 - The only empty street from the end of your bus line is a Bridge space, and
 - At least one Bridge Bus Line marker is available.
- If both conditions are met, you must expand your line across that Bridge. If no Bridge Bus Line marker is available, standard Line Expansion rules apply.

Using Bridges

- Once placed, a Bridge can be used by any player during the Vrrrooomm! action to pick up and deliver passengers, provided the Bridge is connected to their line.
 - Bridges may be entered or exited even from a junction.

Splotter Designers

Airport

- The Airport is the large circular junction in Moon Township that also functions as a Train Station.
- When resolving the Passengers action, a player may bring into play one Splotter Designer (Jeroen or Joris) at the Airport instead of bringing two regular passengers into play.
 - Only one Designer may arrive at the Airport per round.
- If a player has additional passengers to place after placing a Designer, those passengers may be placed at either of the two stations, as per the standard rules.

Transporting Designers

- Designers (and any accompanying passengers) can be transported during the same round in which they are placed, using the Vrrrooomm! action.
- Designers follow the normal rules for transporting passengers and may be delivered to houses, offices, or pubs while visiting Pittsburgh.

Attending Splotter Con

- Jeroen can be transported to the Splotter Con space if the clock is set to Pubs (his meeple is black to align with the Pub tokens).

- Joris may be transported to the Splotter Con space if the clock is set to Offices (his meeple is dark grey to align with the Office tokens).
- Delivering a Designer to Splotter Con:
 - Scores 2 points if delivered in the same round they were placed at the Airport (they don't want to be late!)
 - Scores 1 point if delivered in a later round
- Each Designer may attend Splotter Con only once per game. Both Designers may attend Splotter Con simultaneously.

Returning to the Netherlands

- Only after attending Splotter Con, a Designer can be transported back to the Airport during a Vrrrooomm! action, following the normal rules for transporting passengers.
 - Jeroen will only visit the airport when transporting passengers to pubs
 - Joris will only visit the airport when transporting passengers to offices
- Returning a Designer to the Airport scores 1 point. Once returned, that Designer is removed from the game and may not be transported again.

Bus Pittsburgh designed by Dean Brandt

Layout & graphic design by Todd Sanders.

Bus designed by Joris Wiersinga and Jeroen Doumen.

Special thanks to my playtesters: Zach Virsup, David Clark, Zach Chay-Dolan, Scott King, Wren Zielinsky, Mason Rouser, Zack Bush, Enrico Spada, Chad Carson, Greg Hobaugh, Jason Dunbar, Jess Poteet, Joshua Acosta, Michael Mahoney, Ryan Campbell, Tyler Grissom, Joshua Stewart, Dennis Lind, Zach Greenwalt, Ashley Hudson, and Chris Wray.

Released as a gift to Splotter Con 2026 attendees.
